*No: mObridge supports what's called "numbered playlist" browsing. Browsing the iPod can be done through the CD changer's discs, or unlock the iPod through mObridge's convenience functions (CD #6). See Audio user's manual page 17 for further information on this method of operation.

Is the car ready for iPod (through 6-CD Changer CDC interface) and OR Bluetooth?

Please note that the A2010 series product currently only runs through the CDC Function Block on BMW and thus the car either needs to already have (already active/enabled/"coded" for) CDC or needs to be coded for (e.g., **BMW retrofit coding** procedure using most likely the Autologic aftermarket tool like EAS has). mObridge's latest software has BMW diagnostics in it so theoretically even the dealer tester (BMW DIS) can code the car up with mObridge in the loop but you may find that either the service managers or techs will shy away from this or they throw their hands up if they run into anything at all unexpected and say "doesn't work" (for this reason, for the time being until we all get more experience with the dealers on this we might recommend shying away from actual BMW dealers unless they are very friendly to it and they really understand it).

IN ORDER TO FIT ABT2010 BLUETOOTH, ALL VEHICLES REQUIRE RETROFIT CODING FOR TELEPHONE/BLUETOOTH.
